PATENTS

EXTRACTING ACTIONABLE ITEMS FROM DOCUMENTS AND ASSIGNING THEM TO RESPONSIBLE PARTIES THROUGH NLP

- US 11314938B2 | 29th July 2019
- AU 2020207818A1 | 22nd July 2020

SIMULATION OF ONE OR MORE PIPELINE JOBS IN A SOFTWARE DEPLOYMENT PIPELINE

- US 20240192974A1 | 29th Dec 2022

SKILLS

• PROGRAMMING LANGUAGES:

Python, C, C++, Java, Node.js

• FRONTEND TECHNOLOGIES:

React, JavaScript, TypeScript, Angular, Svelte, HTML, CSS, Micro Frontends

• BACKEND TECHNOLOGIES:

Flask, Express, FastAPI, Unix Scripting

• DATABASES:

Oracle, MySQL, SQL Server, Neo4J, Cassandra, ElasticSearch

• CLOUD & DEVOPS:

GCP, Azure, AWS, DigitalOcean, Jenkins, GitLab, Bitbucket, Autosys, Okta

• AI & DATA:

GenAI, NLP, Knowledge Graphs, IoT

EDUCATION

• KIIT UNIVERSITY

B.Tech in Computer Science
2014–2018

ACHIEVEMENTS

- Awarded the Dell IT President's Award for FY26-Q4 for contributions.
- Awarded the ACE Award for 3 quarters in FY20 for outstanding contributions.
- 2nd Runner-up in Financial Services Hackathon 2019 for building a Credit Decisioning using AI.
- Idea qualified among Top 16 in the Global Innovation Contest (GTIC) 2019.
- Finalist in the Global Innovation Contest (GTIC) 2020, selected from over 100,000 submitted ideas.
- 2nd Runner-up in Project Innovation Contest 2017 at ICDCIT for "Automation of Automobiles Using IoT."
- Best Volunteer Award from National Service Scheme (NSS), KIIT University.

EXPERIENCE

DELL TECHNOLOGIES | PRINCIPAL SOFTWARE ENGINEER

September 2021 – Present | Bengaluru, India

- Built an AI-powered IDE Code Assistant for VS Code integrating GenAI-based CI/CD suggestions, SDLC tooling, and automated security scans for improved developer experience.
- Trained and fine-tuned models for optimal CI/CD pipeline suggestions, improving automation efficiency and reducing manual configuration overhead.
- Designed and implemented a simulation framework for pipeline jobs (Patent Filed), reducing production job failures through proactive configuration validation and execution previews.
- Built a GitLab **Knowledge Graph** to deliver project-specific, context-aware code suggestions tailored to each repository.
- Implemented the Web version of an AI Chatbot, currently serving **1,554 users** with **200+ active monthly users**, and added support for chat-based tool access.
- Led enterprise-wide SSO migration from PingFederate to Okta and infrastructure migration from PCF to Kubernetes, ensuring zero-downtime transitions across 250+ active users.
- Created a unified IDE supporting multiple report process types to retire FlexDeploy, now used by **250+ active users** with **6,300+ reports** downloaded in the first month of enablement.
- Transitioned a **Monolithic** UI application into a **Micro Frontend** architecture, resulting in faster load times and improved team-level manageability.
- Developed automation tools for CI/CD pipelines, DevOps blueprint upgrades, and data migration from Pivotal Tracker to Jira.
- Built and published **36+** reusable UI components for the Dell UX Marketplace, enabling consistent design patterns across engineering teams.
- Implemented enterprise vulnerability management features – enabling users to track code-level vulnerabilities and raise or revoke exceptions – contributing to the resolution of **690K+** code defects.

ACCENTURE SOLUTIONS PVT. LTD | SENIOR SOFTWARE DEVELOPER ANALYST

April 2018 – September 2021 | Bengaluru, India

- Managed a data governance platform handling 30% of the bank's metadata across 16+ lines of business (LOBs), supporting regulatory reporting and data quality standards.
- Operated a high-performance search tool managing **23 million+** records, enabling fast metadata discovery and lineage tracing across the enterprise.
- Developed NLP-powered tools including a data transformation explainer (**250K+ transformations**, saving **350+ hours** for regulatory compliance) and a fuzzy search interface enabling natural language queries with AG-Grid.
- Automated regulatory reporting for **FFIEC** (4 reports) and **10Q** (3 schedules), integrating them with metadata using NLP for OCC and FRB examinations.
- Built data and metadata visualizations using Python (NetworkX) and JavaScript (D3.js v4/6), applying graph algorithms to detect centrality, anomalies, and modularity for advanced analytics.
- Applied NLP techniques to scraped articles, performing open information extraction to generate insights for an AI-powered adverse media search system built on a **Knowledge Graph**.
- Managed end-to-end CI/CD deployments using Quartz and Jenkins, ensuring reliable and efficient integration and delivery processes.
- Selected for Accenture's Quick POC Development Team, delivering client-facing demos that contributed directly to new engagement wins.

IOT LAB | KIIT UNIVERSITY | JUNIOR RESEARCH FELLOW

December 2016 – April 2018 | Bhubaneswar, India

Created IoT proof-of-concepts, established new embedded systems, and managed Linux server administration including clustering and load balancing.

IIT BOMBAY | INTERN

May 2017 – June 2017 | Mumbai, India

Developed a simulation of network infrastructure models using Python (NetworkX) to model and analyse network operations.

IDEA CELLULAR LIMITED | INTERN

May 2016 – June 2016 | Patna, India

Conducted staff training sessions on the newly implemented RMS system, improving adoption across the regional team.
